

The African and South-East Asia Regions sit an order of magnitude below the global median neurological workforce density

Bars are the WHO and World Federation of Neurology Atlas median of the total neurological workforce per 100 000 population within each WHO region (2017, Figure 11); the count under each bar is the number of countries answering that item. Orange dots are individual countries from the WHO Global Dementia Observatory (2017), which counts adult neurologists only and therefore sits systematically below the Atlas bar for the same region. Dots are jittered horizontally to avoid overplotting. Regions are ordered by Atlas median rather than alphabetically. The two instruments track each other closely: the GDO median for the European Region is 6.01 against the Atlas adult-neurologist median of 6.60, and for South-East Asia 0.08 against 0.10.
